

CHARLES B. WHEELER DOWNTOWN AIRPORT

ENVIRONMENTAL RESOURCES AND SUSTAINABILITY PRACTICES

The Kansas City Regional Aviation System Plan, conducted by the Mid-America Regional Council in 2015, reviewed the location of important environmental resources in the vicinity of each airport included in the plan. Airports that have or will accept federal funds to implement capital projects are often required to evaluate potential impacts to the environment from development that could occur on or near the airport. According to FAA Order 1050.1F, Environmental Impacts: Policies and Procedures, numerous environmental resources should be evaluated for impacts prior to the commencement of any major construction or development project at an airport. Best practices indicate that all airports should consider the environment as part of their improvement plans. Airports can be prepared to address potential environmental impacts from

development by identifying, in advance, environmental features that are present on or in the vicinity of an airport. This document presents a basic review of environmental resources that are present near the Charles B. Wheeler Downtown Airport.

In addition to documenting nearby environmental resources, the system plan also inventoried environmental sustainability practices that are already in place at each study airport. The table below shows plans that have been completed to support environmental stewardship or programs that are in place to promote environmental sustainability practices at the Charles B. Wheeler Downtown Airport. Depending on an airport's role in the regional system, a particular environmental program or practice may or may not be identified as an objective for the purposes of this plan.

PRACTICE/PROGRAM	AT AIRPORT
Noise Contours	Currently in Place
Environmental Assessment	Completed in 2007
Wildlife Hazard Assessment/Management Plan	Completed in 2011
Current Spill Prevention, Control, and Countermeasure (SPCC) Plan	Currently in Place
Water Use Efficiency Program	Not In Place
Efficient Energy Use Program for Buildings	Not In Place
Solid Waste Reduction Program	Not In Place
Energy Efficient Programs for Vehicles	Currently in Place
Posted Recycling Program	Currently in Place

ENVIRONMENTAL RESOURCES AND SUSTAINABILITY PRACTICES

FLOODPLAINS

Federal agencies are directed to take action to reduce the risk of flood loss; minimize the impact of floods on human safety, health, and welfare; and restore and preserve natural and beneficial values within areas designated as floodplains. As such, any proposed project at an airport that is funded by federal money must evaluate the potential for impacts to floodplains from airport

expansion. The adjacent map depicts existing floodplains on and near the Charles B. Wheeler Downtown Airport. As shown on the map, floodways do exist near airport property; therefore, future expansion or development should be evaluated to determine any potential impact to area floodways.

THE ENVIRONMENTAL RESOURCES THAT SHOULD BE EVALUATED PRIOR TO ANY AIRPORT PROJECT:

- Air Quality
- Biological Resources
- Climate
- Coastal Resources
- Department of Transportation Act, Section 4(f) properties
- Farmlands
- Hazardous Materials, Solid Waste, and Pollution Prevention
- Historical, Architectural, Archaeological, and Cultural Resources
- Land Use
- Natural Resources and Energy Supply
- Noise and Noise-Compatible Land Use
- Socioeconomics, Environmental Justice, and Children's Environmental Health and Safety Risks
- Visual Effects, including Light Emissions
- Water Resources (Wetlands, Floodplains, Surface Waters, Groundwater, Wild and Scenic Rivers)

ENVIRONMENTAL RESOURCES AND SUSTAINABILITY PRACTICES

ENVIRONMENTAL RESOURCES

The map below depicts environmental features within the vicinity of the Charles B. Wheeler Downtown Airport. The map includes: 1) DOT Section 4(f) public parks, recreational areas, wildlife and waterfowl refuges of national, state, or local significance, or land from a historic site of national, state, or local significance; 2) hazardous waste facilities; 3) historical, architectural, archaeological and cultural resource; 4) wetlands; and 5) environmental justice tracts (areas of minority or

low-income populations). These resources must be evaluated for potential impacts resulting from most proposed development projects completed with federal funds. As shown, hazardous waste facilities, freshwater emergent wetlands, riverines, and environmental justice tracts exist on and/or near airport property. Any future development or expansion of the airport should consider potential impacts to these resources.

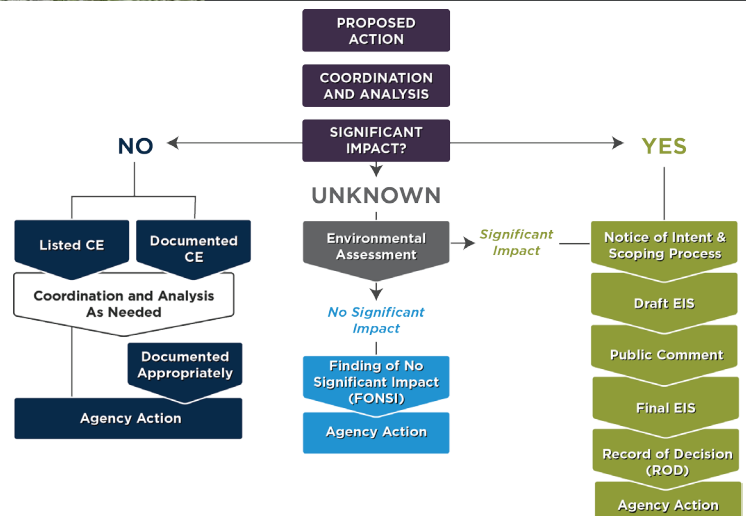

LEVELS OF ENVIRONMENTAL REVIEW:

Level 1: Categorical Exclusions (CE) – Documentation needed for actions that do not have significant environmental effects

Level 2: Environmental Assessment (EA) – Analysis required to determine impacts if they are unknown. If no significant impacts are found, a Finding of No Significant Impact (FONSI) is issued.

Level 3: Environmental Impact Statement (EIS) – Analysis required for projects that will result in significant environmental impacts. A Record of Decision (ROD) states the FAA’s final decision.

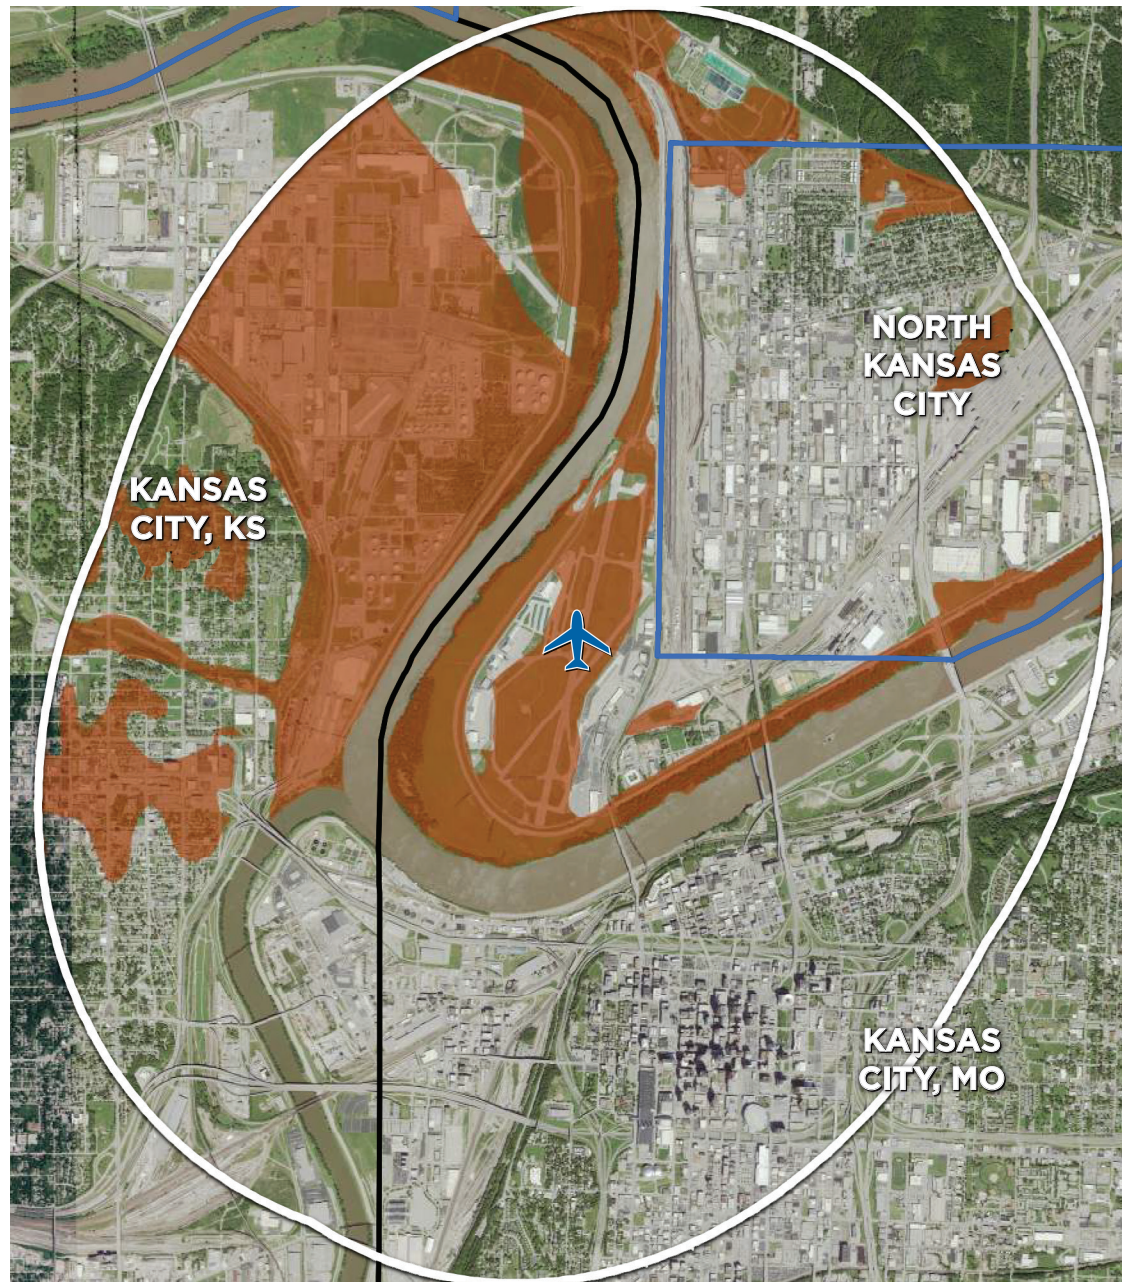

PRIME FARMLAND

Federal actions, or actions that are completed with federal money, must be evaluated for their potential to convert important farmland to non-agricultural uses. This includes all pasturelands, croplands, and forests considered to be prime, unique, or of statewide or local importance. The Farmland Protection Policy Act defines these in detail below:

- **Prime farmland:** land having the best combination of physical and chemical characteristics for producing food, feed, fiber, forage, oilseed, and other agricultural crops with minimal use of fuel, fertilizer, pesticides, or products.
- **Unique farmland:** land that is used for producing high-value food and fiber crops with a special combination of soil quality, location, growing season, and moisture necessary to produce high quality crops or high yields of them economically.
- **Farmland of statewide and local importance:** land that has been designated as "important" by either a state government or by county commissioners or an equivalent elected body.

In the map to the left, a significant amount of prime farmland exists on and surrounding the Charles B. Wheeler Downtown Airport. However, these maps are based on soil structure and do not account for land that has been developed. The land surrounding the Charles B. Wheeler Downtown Airport is primarily developed and future projects would likely not impact any prime or unique farmland.

PRIME FARMLAND FOR CHARLES B. WHEELER DOWNTOWN AIRPORT
